What is the difference between REGISTER and AUTHENTICATE?

Register is what you need to do the first time you use PANEEM.

First, you need to download the app if you are using a smart-phone or iPad or go to our website. Second, you need to take a selfie picture using PANEEM and the front of your government-issued-ID. In instances where there's personal information (such as date of birth) on the back of the identity document you will need to take a picture of the back of your identity document as well.

Authenticate is what you need to do if you have registered for PANEEM successfully in the past. In this case you should be able to go directly to the app or website and input your registration number, date of birth and take selfie picture of your face using PANEEM. You will not need to scan your identity document because we have it on file.

How do I know that I completed PANEEM successfully?

PANEEM sends a confirmation email or text message to let users know that they have completed the process and that their attempt was successful. You can also check your verification status by going back into the app, entering your 7-digit registration number, date of birth and click "Status check" button.

In some cases, after reviewing your attempt, the system cannot approve the verification. In this case we may ask you to try PANEEM again.

Please go to paneem.claimscon.org to repeat the process.

What if I cannot successfully use PANEEM?

It is understandable that this new technology might be difficult for some to complete this year. Please try to use PANEEM at least once to verify your proof of life.

Do I need to take a photo of both sides of my identity document?
