LETTER FROM THE PRESIDENT AND EXECUTIVE VICE PRESIDENT

We are proud to release the second edition of our report summarizing demographic data of the worldwide population of survivors of Nazi persecution. As an organization that works with a unique and vulnerable community, demographic data helps us better understand the survivor community as a whole and provide better services. It allows us to make well-informed decisions by identifying patterns that can lead to better outcomes for those we serve. The needs of survivors may vary according to many factors, which include location, age, health, disability, poverty and persecution history. Given our work with more than 300 social welfare agencies around the world and our direct contact with survivors through the pensions we provide, no one has a greater understanding of these needs.

A little over 70 years ago, the Conference on Jewish Material Claims Against Germany (Claims Conference) signed the first indemnification agreement (the Luxembourg Agreements), making it possible for Holocaust survivors to receive a measure of justice. Since 1951, the Claims Conference has secured over \$95 billion in indemnification for Jewish survivors of the Holocaust for suffering and losses resulting from persecution by the Nazis. This work has ensured that survivors receive pensions, one-time payments and – for those

most in need – life-sustaining services, such as home care, medicine, hot meals and friendly support networks. Our ongoing negotiations with Germany and Austria, which continue to this day, aim to allow survivors to live their final years with the dignity stolen from them in their younger days. Understanding Holocaust survivors, their needs and the challenges they face helps the Claims Conference envision and implement programs to enhance life quality. It is the commitment of the Claims Conference to study the diverse issues they face and, most importantly, how our support can impact their health and well-being. The data we have amassed not only tells us how many and where survivors are, it clearly indicates that the vast majority of survivors are at a time in their lives, or approaching a time, when their need for care is growing. We know and understand that we are rapidly losing survivors and our focus remains steadfast on providing the best possible care for survivors in their final years. It is our goal that these continued reports provide a fuller picture of our Holocaust survivors, so we can meet their needs and safeguard their dignity in their later years. You only need to meet one survivor – this report provides a glimpse into the entire survivor community – to know their resilience is unmatched. They continue to serve as an example for us all.

Gideon Taylor
President

Greg Schneider
Executive Vice President

EXECUTIVE SUMMARY

This report summarizes data on the demographic composition of known Holocaust survivors worldwide as of October 2024. The report is based predominantly on review and analysis of data collected internally by the Conference on Jewish Material Claims Against Germany (Claims Conference).

Since its founding in 1951, the organization has been dedicated to securing a measure of justice for Holocaust survivors worldwide. Primarily as a result of its negotiations with the German government, the Claims Conference administers several compensation funds that provide direct payments to survivors globally and issues grants to over 300 social service agencies

worldwide that provide welfare services and help address the needs of the aging, vulnerable population of survivors. The organization has conducted extensive outreach to identify and provide compensation, social welfare services and socialization programs for survivors and build relationships with survivors around the world.

Through its development of reporting systems, the Claims Conference has amassed significant data which is useful in helping to analyze the demographics of the Holocaust survivor population. This report focuses on the basic demographic characteristics of the population and its geographic distribution.

The Claims Conference partners with local agencies to provide in-home care to Holocaust survivors around the world.

KEY FINDINGS

- There are an estimated **220,800 Holocaust survivors** in over **90 countries** worldwide.¹
- Half (**50%**) of all survivors reside in **Israel**.
- **18%** reside in **North America**, with **16%** of all survivors worldwide residing in the **United States**.
- **17%** reside in **Western Europe**, with **9%** of all survivors worldwide residing in **France**.
- **12%** reside in countries of the **former Soviet Union (FSU)**.
- The current population of survivors is between **78 and over 100 years** of age, born between the years of 1912 and 1946, with a **median age of 87 years**. (This includes a small number who were in utero in 1945 and born in early 1946.)
- The majority (**96%**) of those alive today are child survivors who were born between 1928 and 1946.
- The majority of survivors are **female (61%)** compared to male (39%).
- As a result of the Claims Conference's successful negotiations with the German government over the years, nearly **34% of survivors alive today receive monthly payments** while the rest are eligible for one-time or annual payments.
- Nearly two-thirds of survivors (**62%**) **received at least one payment** under the "Hardship Fund Supplemental Payment Program."
- **45%** of survivors are receiving or received in the past year **social welfare services** provided by over **300 agencies** that receive grants administered by the Claims Conference.
- **92%** of all documented Holocaust survivors worldwide were in **direct communication with the Claims Conference** during 2023 to 2024.

CLAIMS CONFERENCE BACKGROUND

The Conference on Jewish Material Claims Against Germany (Claims Conference) was founded in 1951 on the mission to obtain a measure of justice for Jewish victims of Nazi persecution. The organization's founders realized that no amount of compensation could ever make up for not only the systematic murder of 6 million Jewish people, but also the destruction of vibrant communities and culture.

But the Claims Conference leadership went into its first negotiations with the goals of easing survivors' physical, psychological and financial losses, gaining recognition for their suffering and preserving their experiences of Nazi persecution into the historical record. The Claims Conference signed the first historic agreement with Germany in 1952 and has been a tireless advocate on behalf of Jewish Holocaust survivors. Since then, Germany has paid more than \$95 billion in indemnification to individuals for suffering and losses resulting from Nazi persecution. In that time, Claims Conference negotiations with Germany have expanded the ability of Jews persecuted in Europe, the former Soviet Union and parts of North Africa that were occupied by the Nazis or their Axis allies to access compensation programs. Additionally, the Claims Conference and Germany agreed to support critical social welfare programs, such as including home care, medicine, hot meals and friendly support networks. These efforts have allowed Holocaust survivors to remain in their homes for as long as possible.

This report describes the current population of known Holocaust survivors worldwide. This analysis is based on data the Claims Conference gathered over the years as it expanded compensation and services for

survivors. Survivors have shared their experiences of Nazi persecution, which have been verified through documentation.

Sources of Compensation

The main sources of information by which Holocaust survivors have been identified are through the different compensation programs available to survivors. To assist survivors with their applications, the Claims Conference employs historians and researchers who help document each claimant's persecution history.

Direct compensation used to identify the current population of survivors is made through several main pension programs as well as through one-time payments. The pension programs include:

- “BEG” (Bundesentschädigungsgesetz): The West German federal indemnification law was the original pension program negotiated between the Claims Conference and West Germany, enacted in legislation in West Germany and administered by the West German Länder (States)
- Pensions of the Israeli government from the Holocaust Survivors' Rights Authority (“HSRA”)
- Article 2, “CEEF” (Central and Eastern European Fund), and “RSP” (Regional Specific Pension): Pensions administered by the Claims Conference
- Austrian: Pensions administered by the Austrian government

For details regarding each of these pension programs, see *Appendix A*.

For the pension programs, recipients annually provide documentation or other materials demonstrating that they are alive, and therefore current data has been available and reliable due to these ongoing reporting requirements.

For one-time payment programs, the situation is more complex. The one-time payment program administered by the Claims Conference with German government funds — known

as the Hardship Fund — was created in 1980, and payments under that program have been made over the past four decades. Demographic and other information concerning survivors who received these one-time payments was current when payments were issued. However, updated data regarding these survivors generally was not available, since the same ongoing relationship did not exist with these individuals as exists with pension recipients or with one-time payment recipients who also receive ongoing welfare services funded by the German government.

One of the Claims Conference's most recent achievements was its negotiation of supplemental Hardship Fund payments for those who had previously been entitled to a Hardship Fund payment or had received a one-time payment under Germany's BEG program or from Austria. These additional supplemental payments were first approved for distribution in 2021 and will continue annually through 2027. This not only enabled the Claims Conference to provide additional assistance to Holocaust survivors eligible for the Hardship Fund, but it also resulted in updated data about the population.²

In addition, as a result of ongoing Claims Conference negotiations that seek to reduce or remove many of the barriers limiting survivors' eligibility for these compensation programs, the criteria for receiving one-time payments have changed over time. Liberalizations have included removing income limits as well as extending benefits to survivors who suffered from persecution not previously recognized by Germany — such as those who lived under or fled from the Leningrad Siege and those who currently live in the countries of the former Soviet Union — as well as other new criteria.

These new supplemental payments, as noted previously, have been instrumental in understanding the current demography of Holocaust

survivors. Prior to the inception of the supplemental payments in 2021, the estimates of the number of living survivors (and their profiles) were derived from pension recipients and individuals who received one-time payments under a program that began in 1980. Recipients of the one-time payments, if they were not also receiving Claims Conference-funded social welfare services, often had no contact with the organization, in many cases for years, if not decades. Therefore, studies of survivor demographic data necessarily relied on estimates, taking into account general mortality rates. As a result of the supplemental payment program that began in 2021, the Claims Conference has been able to communicate directly with more than 200,000 survivors around the world. This new information has been critical in enabling the organization to update its prior estimates and provide a current snapshot of the size and other demographic characteristics of the survivor population.

In addition to these individual compensation programs, which provide monthly or one-time payments, many Holocaust survivors also receive social welfare services from agencies funded by the Claims Conference. As part of the negotiations in 1990 resulting in the unification of East and West Germany, a new restitution law for property located within the boundaries of the former East Germany was established. The law enabled tens of thousands of property owners and heirs to file claims and recover assets. The law also designated the Claims

Conference as the “Successor Organization” for unclaimed Jewish-owned property located in what had been East Germany. As a result, the Claims Conference recovered and sold — or received compensation for — thousands of unclaimed properties that otherwise would have reverted to the German government. The Claims Conference applied the sales proceeds and compensation received for such properties to assist Holocaust survivors.

In total, through this program, the Claims Conference has allocated more than \$1 billion in grants, mainly to social welfare agencies. These grants supported relief programs that assisted the poorest and most vulnerable Holocaust survivors with desperately needed food, medicine and home care to enable them to live their final years in dignity.

Over time, the Claims Conference realized that two important factors would have an impact upon critical survivor needs. First, as survivors aged, they wished to remain in their homes and their need for home care would increase dramatically. Second, the Successor Organization’s resources were finite and would diminish as

Holocaust survivors enjoy an event with the musical group Koolulam organized by the Claims Conference in Haifa, Israel. Photo: Claims Conference

A Holocaust survivor enjoys a Thanksgiving celebration provided by the Jewish Community Council of Greater Coney Island with Claims Conference support.

the claims to property located in the former East Germany were resolved. As a result, survivor home care needs became an integral part of the Claims Conference's annual negotiations with Germany. From an initial commitment for home care from Germany of €6 million, this funding has substantially increased. During the 2024 negotiations with the German government, the Claims Conference successfully negotiated €893.9 million (approximately \$972.5 million) for survivors' home health care needs for 2025.

Nearly half (44%) of Holocaust survivors worldwide — all of whom receive, have received or qualify for Holocaust-related compensation — are provided social welfare services that are subsidized by the Claims Conference. Additional detailed data is available for those who receive these services, which includes survivors who do not receive payments administered by the Claims Conference, such as those

who receive pensions directly from Israel or the German government (e.g., under the BEG).

In addition to social welfare services, certain survivors who receive compensation administered by other sources, such as the German BEG or the HSRA in Israel, are also eligible for compensation from the Claims Conference through the Child Survivor Fund. This is a one-time payment available to survivors who meet certain persecution criteria and were born on or after January 1, 1928. This fund originated in 2015 and several hundred new applications for payments were approved in the past year.

Definition of “Holocaust Survivor”

The population represented in this report has a specific definition used by the Claims Conference — based on agreements with the German government in assessing eligibility for compensation programs. This definition is very different from the narrow criteria established in early negotiations with Germany. As a result of ongoing negotiations, the Claims Conference has been able to broaden the definition so that it now includes various groups of Jewish individuals affected by Nazi persecution, from those who were in concentration camps, forced labor camps and ghettos to those who were forced to flee or to live in hiding. This includes Jewish individuals who were persecuted in North Africa, that is, in Algeria, Libya, Morocco and Tunisia. It also includes those who were in utero, recognizing Jews who were fetuses during the Nazi persecution of their mother and who were born up to 9 months after liberation/flight of their mother.

The definition considers the fact that dates of occupation varied by country. For those who were in Germany, the dates are from January 30, 1933, when Adolf Hitler was sworn in as Chancellor, to May 1945, after Germany signed an agreement of unconditional surrender. For those in Poland, the date range is

from September 1, 1939, when German troops invaded Poland, to January 1945, when virtually all of Poland within its pre-war borders had been liberated by Soviet forces. For a detailed list by country, see *Appendix B*.

The definition also differs somewhat from the criteria that is used in Israel for determination of benefits in Israel. For example, the government of Israel recognizes Jews who lived in Iraq as eligible for certain benefits while the German government and Claims Conference do not. Details regarding these differences are included in *Appendix B*.

Sources of Data

The description of the survivor population presented in this report is based on a combination of data. The main source of data is derived from the administrative records of the Claims Conference. These records include:

- Demographic characteristics of the individual claimants in each compensation application, such as age, gender and birth country
- Documentation of individual persecution histories
- Payments received from each compensation program administered by the Claims Conference (i.e., those other than the BEG and Austrian programs)
- Services received from social welfare agencies that provide home care, emergency assistance and other assistance

Records were included for all survivors in the Claims Conference data who received Claims Conference-administered pension payments in the fourth quarter of 2024, received Hardship Supplemental payments, received one-time payments from the Hardship Fund, Child Survivor Fund, or the Solidarity for Israel Fund in the past two years (i.e.,

since January 2022), or received any social welfare services in the past two years.

In addition to Claims Conference data, other sources of information have been used to describe the population. The governments of Germany, Israel and Austria, respectively, provide periodic reports on the number of current German BEG, Israeli and Austrian pension recipients. The most recent report on German BEG pension recipients was December 31, 2024. The most recent report on the total number of Israeli HSRA pension recipients was October 1, 2024. The most recent report for Austrian pensioners was for December 1, 2022. Individual level data — such as gender, age and persecution history — are not available from the data provided by the German, Israeli and Austrian governments. Many of these pensioners, however, particularly under German BEG and Israeli programs, also receive services through social welfare agencies funded by the Claims Conference. Demographic characteristics of these individuals are included in the population profile.

A Holocaust survivor attends a Claims Conference open house event in Brooklyn.

POPULATION PROFILE

Based on analysis of available sources of data, there are 220,800 Holocaust survivors worldwide. This estimate is as of October 2024, but it is important to note that the population constantly changes. The majority of these survivors have been identified through

recent outreach efforts related to providing Hardship Fund Supplemental payments to all eligible living survivors (see *Table 1 below*). Thirty-four percent of these survivors (74,400) receive ongoing payments through one of the pension programs.

Table 1. Sources of Compensation among Worldwide Holocaust Survivor Population, 2024

Program	Survivors	Percent
Pension Programs Total	74,400	33.7
<i>Article 2 and CEEF</i>	37,300	16.9
<i>Israel (HSRA)</i>	23,600	10.7
<i>Germany (BEG)</i>	6,600	3.0
<i>Austria</i>	2,000	0.9
<i>Region-Specific Fund (RSP)</i>	5,000	2.2
Hardship Fund Supplemental	136,300	61.7
Other	10,100	4.6
Total	220,800	100

Sources: **Article 2 and CEEF:** Claims Conference, individuals paid Article 2 or CEEF pensions in 2024. **Israel:** Holocaust Survivors’ Rights Authority, October 1, 2024.³ **BEG:** German Federal Minister of Finance, December 31, 2024.⁴ **Austrian:** Austrian Pension Authority, December 1, 2022, adjusted for mortality.⁵ **Hardship Supplemental:** Claims Conference, individuals paid a Hardship Supplemental payment. **Other:** Claims Conference, individuals who received one-time Hardship or Child Survivor Fund payments or payments from other sources (e.g., Israel yearly payments, previous one-time payments from the German government) and have continued contact through agencies that receive grants from the Claims Conference.

Population by Age and Gender

The current population of survivors, born between the years 1915 and 1945, ranges in age from 78 years to over 100 years (see *Table 2 below*).

Just over half a percent are over 100 years old. The median age of 87 years divides the

population into two groups, half younger and half older. The majority (96%) are child survivors who were born after 1928. Almost 76% of survivors were between the ages of 2 and 11 years in 1945. In line with general demographic trends among older adults, the majority of survivors are women (61%), with approximately 63 men for every 100 women (62.9 per 100).

Table 2. Age Distribution of Survivors, 2024

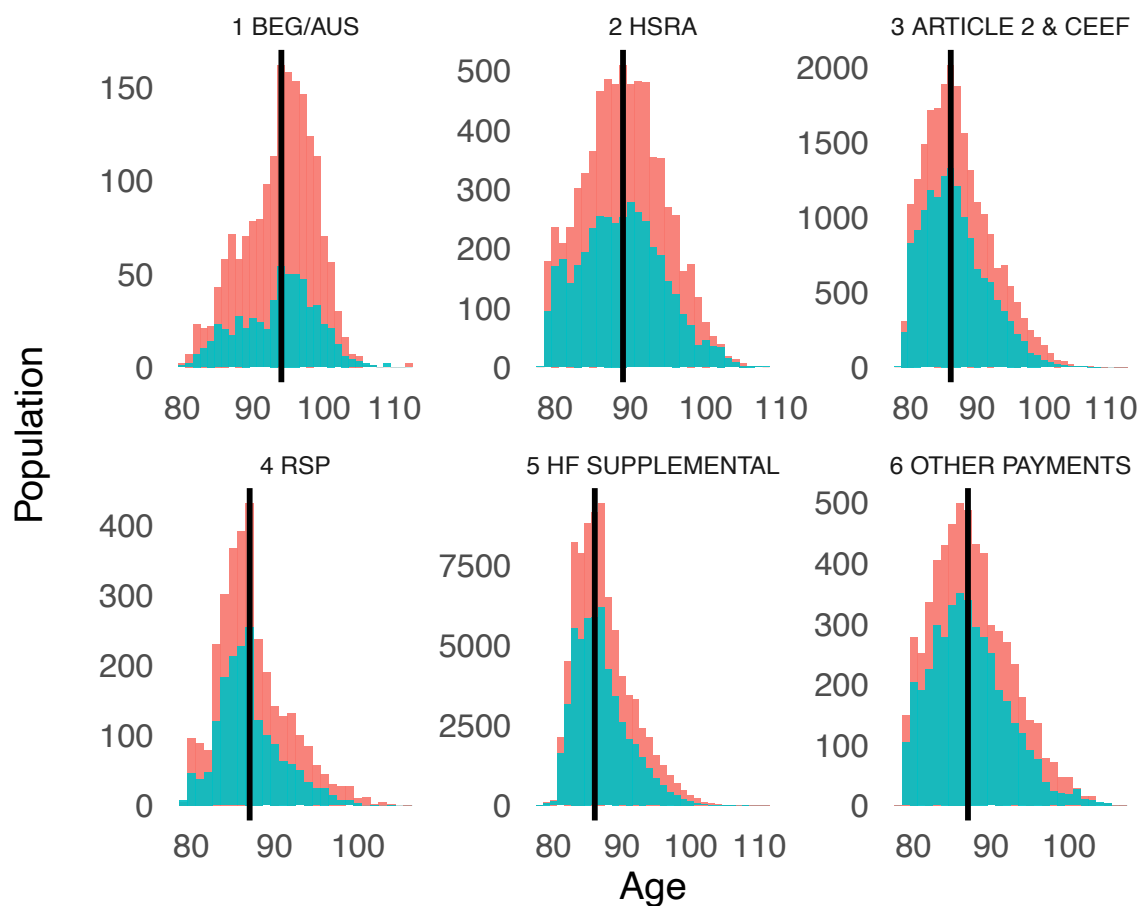

Percent by Age Group					
Birth Years	Age in 1945	Current Age	All Survivors	Female	Male
			100.0	61.4	38.6
1944 to 1946	0 to 1 year ^a	78-80 years	2.2	2.1	2.4
1939 to 1943	2 to 6 years	81-85 years	36.5	35.5	38.1
1934 to 1938	7 to 11 years	86-90 years	39.4	39.2	39.7
1928 to 1933	12 to 17 years	91-96 years	17.9	18.6	16.7
1924 to 1927	18 to 21 years	97-100 years	3.3	3.8	2.5
1923 and earlier	22 to 33 years	>100 years	0.7	0.8	0.5
Summary Indicators					
		Median Age	87	87	86
		Minimum Age	78	78	78
		Maximum Age ^b	>100	>100	>100
		Sex Ratio (males per 100 females)	62.9		

Notes: **a)** Includes a small number of survivors who were born in early 1946. **b)** Specific ages over 100 years are suppressed. Not all survivors over 100 years of age have date of birth documented through birth certificates.

Figure 1 displays the age distributions for the different compensation groups. The median age for each compensation group is displayed as a vertical black line. Age distributions for German BEG, Austria and Israeli HSRA recipients are based on the subpopulation of

survivors who receive these pensions and are in recent contact with the Claims Conference. Those who receive BEG and Austrian pensions, with a median age of 94 years, are older than other groups.

Figure 1. Distributions by Age for Female and Male Holocaust Survivors by Compensation Group, 2024.

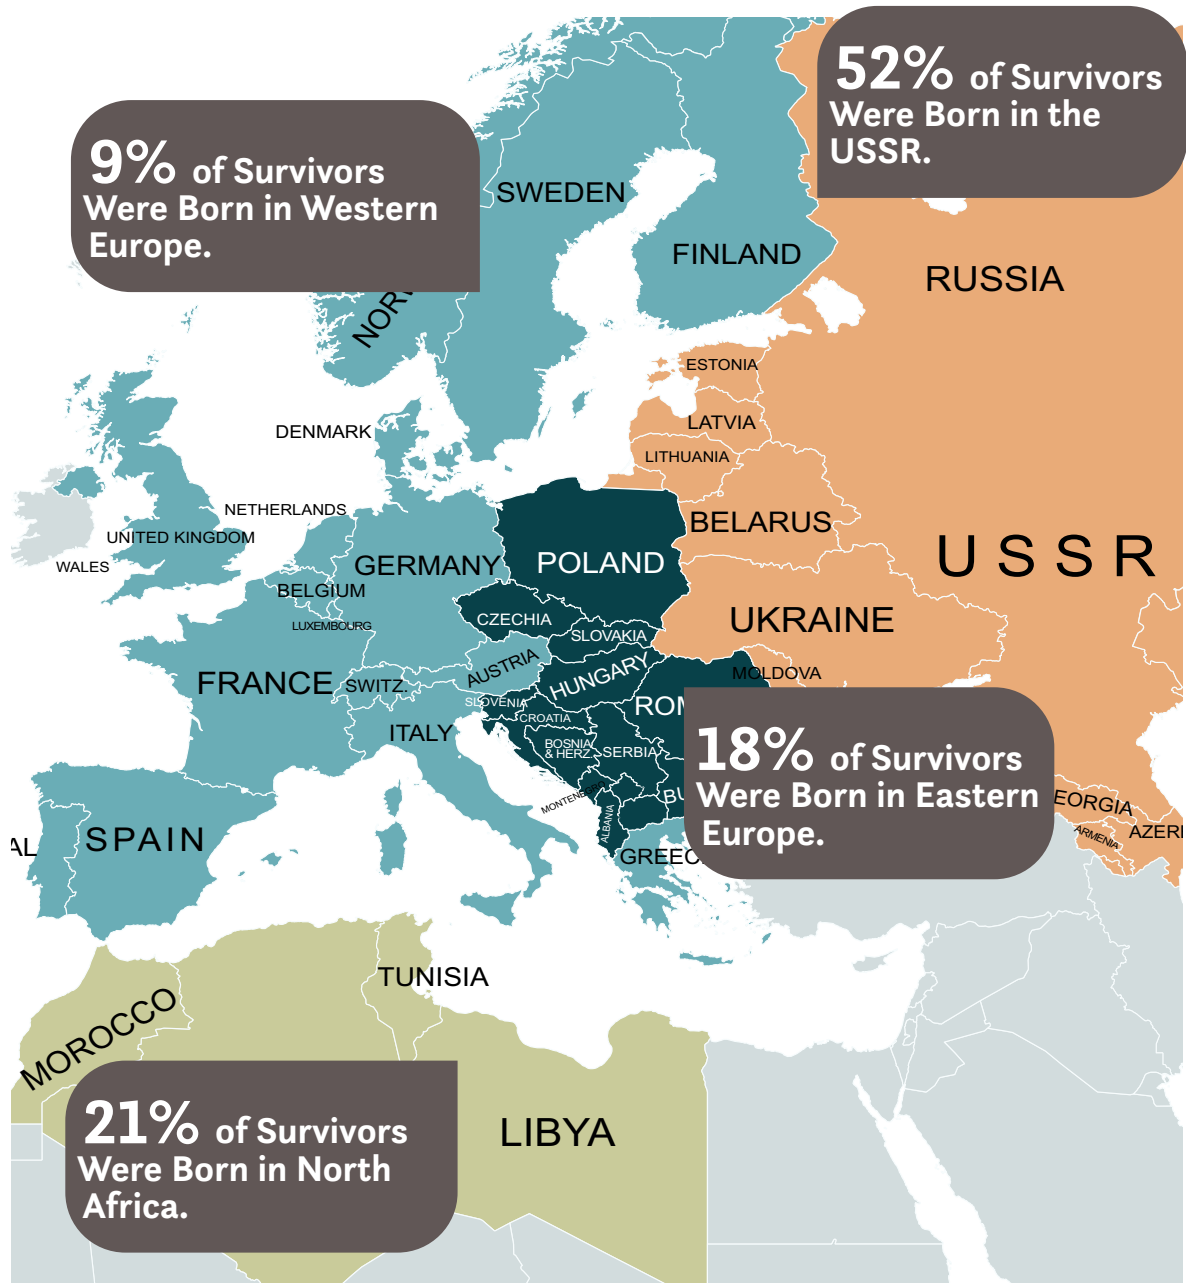

The black vertical line in each chart represents the median age for each compensation group. (1) Survivors who receive pensions from the German (BEG) and Austrian governments. (2) Survivors who receive pensions from the Israeli government (HSRA). (3) Survivors who receive Claims Conference pensions from the Article 2 and Central and Eastern European funds. (4) Survivors who receive Claims Conference pensions from the Regional Specific Pension Program. (5) Survivors who receive Claims Conference Hardship Fund Supplemental payments. (6) Survivors who received other one-time payments or payments from other sources and services.

Population by Country of Birth

Most Holocaust survivors alive today (52%) were born in the former Soviet Union (see Figure 2). Twenty-one percent of survivors were born in Africa, primarily in Morocco, Algeria and Tunisia. Eighteen percent were

born in Eastern Europe, including Romania, Hungary, Poland, Czechoslovakia and Yugoslavia. Nine percent were born in Western Europe, including France, Germany, Austria and Netherlands. A very small number of survivors were born outside of these regions.

Figure 2. Country of Birth for the Current Population of Holocaust Survivors.^a

Notes: a) Country of birth is based on self-report of the survivor.

This includes those born in Shanghai and others who were born elsewhere but who lived in affected countries during the period of Nazi persecution.

Those born in Eastern and Western Europe are predominantly pension recipients (see Table 3). Seventy-four percent of those born in Eastern Europe and 79% of those born in Western Europe receive pensions. In contrast, the overwhelming majority of those born in the FSU, as well as those born in North Africa, are Hardship Fund recipients and receive the Hardship Supplemental payments. Eighty-six percent (86%) of those born in the FSU and 96% of those born in North Africa received Hardship Supplemental payments.

Survivors born in the former Soviet Union are younger than survivors born in Eastern and Western Europe. Of those born in the FSU, 79% of women and 82% of men are aged 78 to 90 years old, compared to 67% and 72% born in Eastern Europe, and 67% and 74% born in Western Europe. Those born in North Africa are also disproportionately younger, with 83% of women and 85% of men aged 78 to 90 years old.

The majority of those born in the former Soviet Union currently reside outside of the FSU. Most reside in Israel (38%), followed by North America (26%) and Western Europe (10%) (see Table 5A). Of those who currently reside in the FSU, nearly all (99.7%) were born in the FSU (see Table 5B). Seventy-four percent (74%) of survivors in North America were born in the FSU, as were 41% of survivors in Israel. Survivors currently living in the FSU often face the greatest need due to weaker social safety nets. Even those who were born in the FSU and later migrated to countries with stronger support systems frequently remain among the most vulnerable, struggling with poverty and high levels of need.

Population by Region

The current population of survivors reside in over 90 countries throughout the world (see Figure 3). The largest number of survivors — 110,100, representing half (50%) of all survivors worldwide — reside in Israel. This figure is less than the 123,715 reported by the State of Israel’s Holocaust Survivors’ Rights Authority on Holocaust Remembrance Day 2025⁶, which included both Holocaust survivors as well as

Table 3. Distribution of Compensation of Holocaust Survivors by Region of Birth Country, 2024

	Percent of Survivors within Region

	>100	0.2	0.2	1.5	1.0

those whom Israel recognizes as victims of antisemitic persecutions during the war.⁷

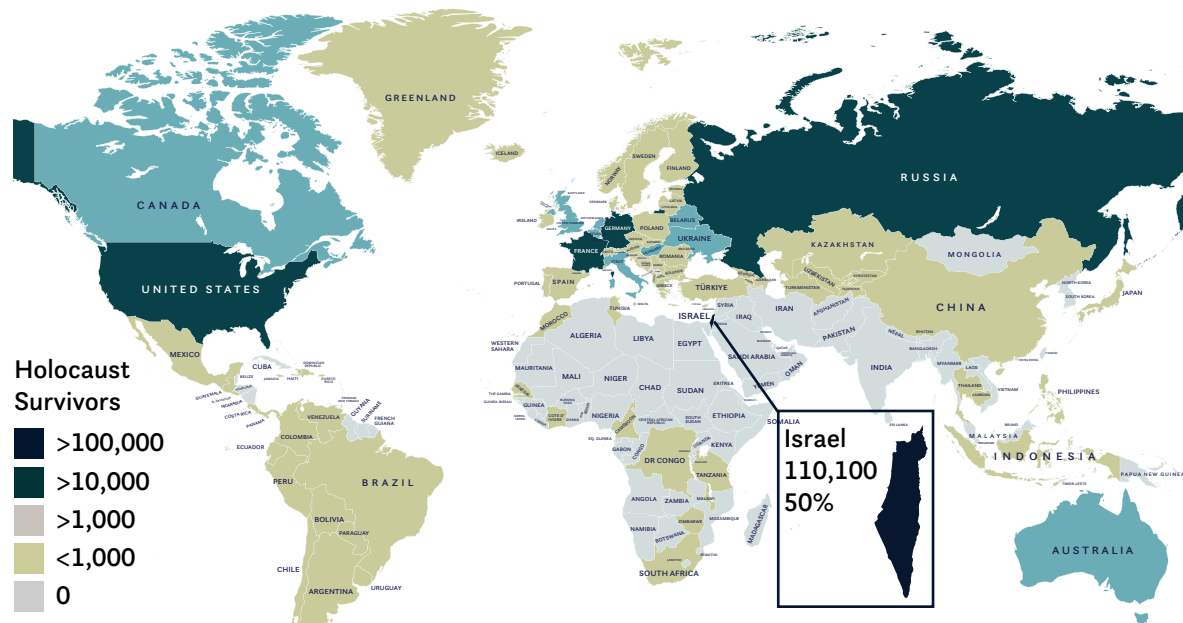

The second and third regions with the greatest percentage of survivors are North America (18%) and Western Europe (17%) (see *Table 6*). This is followed by countries of the former Soviet Union (12%), Eastern Europe (2%) and just over 1% in remaining regions of the world.

Five countries — Israel, the United States, France, Russia and Germany — are home to 87% of all survivors (see *Table 7*). Ninety-five percent (95%) of all survivors reside in 10

countries. See *Appendix C* for the full list of countries in which survivors reside and the estimated number of survivors per country.

In the United States, which has the largest number of Holocaust survivors outside of Israel, nearly 38% of survivors are in New York State. Ninety percent of survivors live in ten states. In addition to New York, these include California (15%), Florida (8%), Illinois (6%), New Jersey (6%), Massachusetts (5%), Pennsylvania (4%), Maryland (3%), Ohio (2%) and Michigan (1%).⁸

Figure 3. Distribution of Holocaust Survivors in Over 90 Countries Worldwide, 2024

The population of Holocaust survivors in France reflects the large migration of Jews from North Africa. While 30% of survivors were born in France, 38% were born in Algeria, 18% in Tunisia and 12% in Morocco. Similar to the population worldwide, 95% of these survivors were children during Nazi persecution, with 76% of the population currently between the ages of 81 and 90 years.

In Australia, where the migration of Holocaust survivors after the war doubled the size of the Jewish population, the majority of survivors live in Melbourne (54%) and Sydney (38%) and their surrounding suburbs. Whereas the majority of survivors who migrated between 1933 and 1957 were predominantly from Poland and Hungary, 61% of the current population of survivors in Australia were born in the former Soviet Union, while 10% were born in Hungary, and 8% in Poland. There is still a greater percent of survivors born in Hungary living in Sydney (16%) than in Melbourne (5%), and a greater

percentage of survivors born in Poland living in Melbourne (12%) than in Sydney (4%).

There is little difference across regions in the age distribution (see *Figure 4*). The median age is 87 years in Western Europe and North America. It slightly lower (median = 86 years) among survivors in Israel and FSU. The median age is 85 in Eastern Europe. There are regional differences in the percentage of female and male survivors. This is reflected in the sex ratio (SR), which is the ratio of the number of males per 100 females, with a value of 100 indicating equal numbers of men and women. Higher mortality among men than women leads to values lower than 100. The ratio of men to women among survivors is highest in Western European countries (SR = 70) and lowest among survivors in countries of the former Soviet Union (SR = 54). These differences are consistent with regional trends more broadly where countries of the former Soviet Union have much higher mortality rates among men than women.⁹

Higher mortality among men than women leads to values lower than 100. The ratio of men to women among survivors is highest in Western European countries (SR = 72) and lowest among survivors in countries of the former

Soviet Union (SR = 55). These differences are consistent with regional trends more broadly where countries of the former Soviet Union have much higher mortality rates among men than women.

Table 5A. Distribution of Holocaust Survivors by Region of Birth Country and Current Residence, 2024

	Region of Current Residence						
Region of Birth Country	Israel	Western Europe	North America	Eastern Europe	Former Soviet Union	Other	Total
Former Soviet Union	38.2	10.1	25.5	0.1	24.9	1.2	100.0
North Africa	66.1	30.1	3.5	0.0	0.0	0.3	100.0
Eastern Europe	66.1	2.8	15.0	13.8	0.1	2.1	100.0

Figure 4. Distributions by Age for Female and Male Holocaust Survivors by Region, 2024

Notes: Regions represented: (1) Israel, (2) Western Europe, (3) North America, (4) former Soviet Union, (5) Eastern Europe, and (6) the rest of the world. Vertical lines represent the median age for each region. SR indicates the number of males per 100 females for each region.

Increasing Needs

With a median age of 87 years and 22% over the age of 90 years, many Holocaust survivors are in, or are approaching, a period of life characterized by increasing costs of care.¹⁰ Among the current population of survivors, 45% are currently receiving services from agencies that are funded through grants administered by the Claims Conference. The increase in need is seen in new requests for home care and related

services. Between 2023 and 2024, requests for care increased from over 36,000 new requests in 2023 to just over 59,000 in 2024. Of these new requests, just over 1,000 (roughly 4%) of these survivors had not applied for compensation previously.

Such increases in requests for assistance are indicative of the trends reported by agencies. Although the total number of Holocaust survivors is, unfortunately but inevitably,

decreasing, the needs among those who remain are increasing. There are two main factors impacting this trend. First, survivors who, until now, did not need help, are aging and requiring more assistance. Second, those who are already receiving assistance are experiencing increasing disability, which requires increasing assistance. Further, especially in these high inflation years, the costs of providing these services have also increased. Exacerbating these factors, often traumatic world events such as COVID-19, the war in Ukraine and the October 7 massacre in Israel can trigger additional emotional issues.

Figure 5 shows the Claims Conference’s increasing allocations globally to agencies over the past eight years, reflecting the intention to address increasing needs.

SUMMARY

The present report provides a comprehensive overview of the population profile of known Holocaust survivors worldwide, including sources of compensation, definitions and data sources. It highlights the changing needs as the population ages.

Overall, Claims Conference research found an estimated 220,800 Holocaust survivors worldwide. Of these survivors, 87% are receiving ongoing payments or received payments in the past year directly from the Claims Conference. An additional 5% of survivors, although receiving compensation either from Israel or from funds negotiated by the Claims Conference and administered by other entities or governments (e.g., Germany and Austria), are receiving Claims Conference-funded services. Thus, 92% of documented Holocaust survivors worldwide were in direct communication with the Claims Conference from 2022 through 2024.

Prior to this recent work by the Claims Conference, the most comprehensive assessments were conducted around the year 2000 and were summarized in the 2000 *Special Master's Proposed Plan of Allocation and Distribution of Settlement Proceeds, In re: Holocaust Victim Assets Litigation (Swiss Banks Settlement)*.¹¹ Sources included administrative records, census data and surveys of Jewish adults that assessed, for those born prior to 1946, their experiences during the period of Nazi persecution. Census-based estimates identified survivors based on year of birth, country of birth and dates of immigration. In the absence of census data and for the study of a population for which there are no official statistics, these past approaches to estimation were especially useful in highlighting where to allocate resources and outreach efforts.

A marked difference between these past studies, mostly dating back twenty years, and this analysis is that the present report is based on direct assessment of all survivors whose individual experiences of Nazi persecution have been verified through documentation. Through extensive global outreach, the Claims Conference has been able to establish an unprecedented worldwide database of survivors documenting not only their persecution history but also their needs as they age.

The portrait of the current population of Holocaust survivors derived from these data indicates that the population is widely dispersed throughout the world, is comprised primarily of those who were children at the time of Nazi persecution and are predominantly survivors from the former Soviet Union. In addition, similar to

elderly populations more generally, the population is disproportionately female, especially among survivors in the former Soviet Union. The characteristics of the current population have implications for the needs that must be met in upcoming years.

Geographic Distribution

Holocaust survivors currently reside in 90 countries across the globe on all continents, with the exception of Antarctica. Half of all Holocaust survivors worldwide currently reside in Israel, followed by North America, Western Europe and the countries of the former Soviet Union.

After Israel, which is home to 110,100 survivors, the United States is home to the next largest population of survivors with 34,600 survivors, followed by France with 18,900 survivors, Russia with 16,100 and Germany with 11,900. There are smaller but also substantial numbers of survivors in Ukraine, Canada, Hungary, Australia, Belarus, Italy, Netherlands, the United Kingdom and Belgium, ranging from 6,200 survivors in Ukraine to 1,100 in Belgium and the United Kingdom.

Outside of these top countries, in Western Europe there are hundreds of survivors in countries such as Austria, Denmark, Greece, Sweden, Switzerland and smaller numbers in Spain, Luxembourg, Norway, Portugal, Finland, Martinique and Ireland. In Eastern Europe, there are hundreds of survivors in Romania, Czech Republic, Poland, Slovak Republic and Bulgaria with smaller numbers in Estonia, Croatia, Serbia, Montenegro, Bosnia-Herzegovina and Armenia. There are also hundreds of survivors in Latvia, Lithuania and Moldova. In South America, there are hundreds of survivors in Brazil and Argentina.

There are just an estimated 300 survivors outside of these main population areas of Israel, North America, Western and Eastern Europe,

and the former Soviet Union, including African countries of Morocco, South Africa and Tunisia.

The dispersion of survivors throughout the world highlights both the needs and the challenges associated with a continued commitment to support the network of social service agencies globally to meet the needs of survivors where they live.

Child Survivors

Nearly all the current population of survivors were children at the time of Nazi persecution, having survived camps, ghettos, flight (including the Kindertransports), and living in hiding. More than 78% of all known survivors alive today were under 12 years of age in 1945, the year World War II ended. Just over one third (36%) were between the two and six years of age.

Children had the slimmest chances of surviving.¹² Nazis killed an estimated 1.5 million children. Many children survived the Holocaust by living in hiding and concealing their Jewish identity. As the academic and medical communities have recognized, those children who survived the atrocities of the Holocaust often suffered a unique level of trauma.¹³

About 39% child survivors are currently between the ages of 78 and 85 years. The implications are that these survivors are in the stages of life associated with increased health-related challenges and associated costs, particularly costs related to home care so that they can age in place at home.

Survivors of the former Soviet Union

Of the current population of survivors, the greatest percent — over half (52%) were born in countries of the former Soviet Union. This in large part reflects the fact that the proportion of survivors of camps and ghettos — most of whom were eligible for pensions — has been

rapidly declining. A majority of survivors are receiving Hardship Supplemental payments. These survivors are predominantly from the former Soviet Union (FSU), many of whom fled or suffered deprivation of liberty, such as living under curfew or house arrest (*résidence forcée*).

Survivors from the FSU are also younger than those from Western and Eastern Europe. They also tend to have higher rates of poverty and worse health compared to other survivors due to poorer economic and health conditions in the FSU countries in which they reside. For survivors from the FSU who reside outside of the FSU, many migrated after the collapse of the Soviet Union and arrived in their new countries at older ages where entering the work force was more difficult or not possible, especially given language barriers. The combination of their age, health and current life expectancies indicate that many challenges will remain to meet the increasing medical and other essential needs of these survivors.

Compensation through Services

In 2024, the Claims Conference allocated \$888 million for social welfare services to 300 social service agencies globally. This amount has increased from \$650.7 million in 2021.

These agencies provide direct services to meet the needs of Holocaust survivors worldwide. These services include, but are not limited to, home care, medicine, food, dental care, emergency assistance and transportation to doctors. Although 45% of survivors currently receive these services, there remains unmet need. Particularly given the advancing age of survivors, it is expected the need for services such as these will grow. Providing support to agencies offering these services is an efficient way to meet the needs of survivors.

Conclusions

With just under a quarter of a million survivors worldwide, ranging in age from 78 to over 100 years, it is expected that the needs of survivors will continue to grow. Not only are all of these survivors entering the stages of life where needs associated with aging increase, but many are also child survivors and survivors of the FSU and each characteristic is associated with increased needs. These survivors are younger, while also in fragile economic and/or medical condition, so that ongoing assistance programs remain critically important.

As the Claims Conference continues its work on behalf of Jewish Holocaust survivors throughout the world, the current distribution and needs of the population will be weighed. We will continue to refine the use of available sources of data to inform our understanding of their needs. Upcoming and future work will include modeling of mortality rates and population projections, as well as projections of home care needs, taking into account all of the factors that affect the population.

METHODOLOGICAL NOTES

How We Did This

The Claims Conference's advocacy on behalf of Holocaust survivors has made this and all subsequent demographic reports possible. Over the previous decades, and still today, the Claims Conference conducted extensive outreach to ensure that as many survivors as possible were made aware of and encouraged to apply for compensation. This outreach included advertising (print and other media), communication to communal organizations, survivor groups, synagogues and other agencies and organizations. This extensive outreach has led to the establishment of a unique and unprecedented database of Holocaust survivors around the world - this includes the persecution history of survivors and also provides insights to their needs as they age.. The database is comprised of all those who have ever responded to outreach to apply for compensation as well as those who receive German government-funded services also administered through the Claims Conference.

In addition to these outreach efforts, the Claims Conference negotiations have sought to expand the criteria for eligibility for compensation to include as comprehensive a representation of all Jewish survivors of Nazi persecution as possible. Over the years, criteria have been expanded not only to include a more complete registry of all camps and ghettos, including camps in North Africa⁴, but also to reduce or remove income requirements, and to extend benefits to those who suffered from persecution not previously recognized by Germany — such as those who lived under or fled from the Leningrad Siege, those who currently live in the countries of the former Soviet Union, those who lived in open ghettos, as well as other new criteria (see *Appendix B: Definition of Holocaust Survivor*).

The most recent and extensive outreach efforts were the result of negotiations that afforded additional Hardship Fund payments (Hardship Supplemental payments) for all Holocaust survivors worldwide who were not currently receiving ongoing payments from any of the available survivor pension programs. These payments are for all who had previously been entitled to a Hardship Fund payment or had received a one-time payment under Germany's BEG program or from Austria. These additional payments were first approved for distribution in 2021 and will continue annually through 2027. This not only enabled the Claims Conference to provide additional assistance to Holocaust survivors eligible for the Hardship Fund, it also resulted in the ability to provide updated data about the population.

Prior to these most recent outreach efforts, the Claims Conference maintained data on all survivors who received pensions or one-time payments administered by the Claims Conference, as well as those who received

services through agencies that received Claims Conference administered grants. For the pension programs, recipients annually provide documentation or other materials demonstrating that they are alive, and therefore current data has been available and reliable on this population due to these ongoing reporting requirements.

For those who had received one-time payments, however, the situation was more complex. The one-time payment program administered by the Claims Conference with German government funds — known as the Hardship Fund — was created in 1980, and payments under that program have been made over the past 44 years. Demographic and other information concerning survivors who received these one-time payments was current when payments were issued. However, updated data regarding these survivors generally was not available, since the same ongoing relationship did not exist with these individuals as with pension recipients or with one-time payment recipients who also receive ongoing welfare services funded by the German government.

The new Hardship Supplemental payments have been instrumental in establishing updated information on all survivors who had received

one-time payments in the past and have not had ongoing communication with the Claims Conference. For those survivors known to the Claims Conference through prior one-time payments and who did not respond to outreach efforts, LexisNexis searches were conducted to search for death announcements. There was also communication with the Ministry of Finance for survivors in Israel.

All survivors who respond to outreach efforts are invited to apply for compensation (see *Appendix A: Sources of Compensation*). The characteristics of individual claimants, including basic demographics, persecution history and payments received, are recorded in a central “claimant” database. In addition, for any survivors who receive social welfare services or participate in socialization services through agencies that receive grants administered by the Claims Conference with German government funds, agencies record additional information about each survivor in a separate “services” database. The claimant database is matched to the services database to provide a complete portrait of each survivor.

Despite all efforts to locate survivors, there are those who may choose not to be identified, as well as individuals who for various reasons may not consider themselves to be Holocaust

survivors. While new applications for compensation continue to be submitted, they are few in number (~1% of the total population) and would not change the overall landscape of the survivor population, especially as new cases unfortunately are offset by deaths.

While it is unlikely that there are many survivors who are unknown to the Claims Conference, if one were to suppose that the number of such survivors were as many as 5-10% of the survivor population worldwide, the total population might be as high as 232,400 or 245,300. The Claims Conference will continue to reach out to all who can be identified.

Individual Data not Available for All

The analysis of individual level demographic characteristics of survivors (i.e., age, sex,

country of birth) does not include data on those survivors who receive ongoing payments from other entities — Israeli HSRA, German BEG or Austrian pensions — and have not been in communication with the Claims Conference either through receipt of services from agencies whose funding is administered by the Claims Conference or receipt of recent payments from the Child Survivor fund. This corresponds to 8% of all survivors. Because the Israeli, German and Austrian governments only report numbers of those who receive pensions and do not share data on individual level characteristics, it is unknown how these pensioners might differ from other Holocaust survivors. At 8% of the total population, however, it is unlikely they would significantly alter demographic distributions such as age and birth country.

APPENDIX A: SOURCES OF COMPENSATION

Direct compensation to Holocaust survivors is made through several main pension programs as well as through one-time payment programs. These compensation programs are described more specifically as follows:

BEG (“Bundesentschädigungsgesetz”)

The West German Federal Indemnification Law was enacted by the Government of West Germany, implementing the 1952 Luxembourg Agreement with the Claims Conference. Although referred to by the German government as *Wiedergutmachung* — literally meaning “making good again” — the Claims Conference has consistently rejected use of that term because Holocaust survivors, who lost families, livelihoods and their way of life, can never be “made good again” by any amount of material compensation. The Claims Conference regards those payments as symbolic recognition.

The BEG encompasses three separate German compensation laws adopted in 1953, 1956 and 1965 (along with various amendments). The BEG provided for both “one-time payments” as well as ongoing pensions. The BEG recipients in this report refer to those alive today who receive ongoing pensions. Those living in Communist countries could not apply to the BEG nor could those who resided in Western European countries that concluded a “Global Agreement” with West Germany. The deadlines for filing BEG claims expired before 1970; thus, it is no longer possible for new applicants to receive compensation under the BEG.

HSRA (The Holocaust Survivors’ Rights Authority, Israeli Government Pensions)

As part of the Luxembourg Agreements, West Germany provided funds to the State of Israel in acknowledgment of the undue burden associated with resettling the large numbers of destitute Jewish refugees who had been persecuted by the Nazis. Most of the survivors who had immigrated to Israel before October 1, 1953 could not seek a pension directly under the BEG for the damages to health that they suffered. Instead, they were to be compensated by Israel through German reparation funds. In 1957, the Israeli Knesset enacted the Disabled Victims of Nazi Persecution Law, which was created specifically to provide funds to those who would have been eligible for a health damages pension under the BEG. Survivors in Israel had to have immigrated to Israel prior to October 1, 1953, and had to have been Israeli residents and citizens since April 1957.

In addition to monthly pensions through the Nazi Persecution Law of 1957, survivors in Israel are eligible to receive compensation through several programs administered by the Holocaust Survivors’ Rights Authority in Israel. This includes Israel’s 1954 Law on the Disabled in the War with the Nazis, which provides monthly pensions to those injured during active service in the armies of one of the Allied powers or in units that fought underground. In 2007, the Israeli Knesset passed the Holocaust Survivors’ Benefit Act, which provided monthly pensions to those who survived the camps and ghettos and who were not currently receiving monthly compensation, such as those who immigrated to Israel after October 1, 1953. In addition, survivors who receive a BEG pension for health damages are eligible for a quarterly pension, and those with low income are eligible for an annual grant. Survivors of low income who receive an Article 2 pension are eligible for an income supplement pension.

Article 2 Fund

From the earliest negotiations in 1952, West Germany recognized its obligations in principle to provide some compensation to Holocaust survivors. In contrast, the Communist East German government denied any such responsibility. However, in 1990, when West and East Germany were negotiating their unification agreement, the Claims Conference insisted that the newly unified Germany should meet its responsibility to survivors of the Holocaust who had previously received little or no compensation.

The U.S. government, with the support of the Claims Conference, pressed the newly created German government to provide additional compensation for certain survivors. Article 2 of the Implementation Agreement to the German Unification Treaty of October 3, 1990, states, in pertinent part:

“The Federal Government is prepared, in continuation of the policy of the German Federal Republic, to enter into agreements with the Claims Conference for additional Fund arrangements in order to provide hardship payments to persecutees who thus far received no or only minimal compensation according to the legislative provisions of the German Federal Republic.”

This commitment led to the October 1992 signing of the agreement that set forth the initial criteria of the Article 2 Fund, through which compensation is made in the form of quarterly payments.

Ongoing Claims Conference negotiations have resulted in an expansion of the Article 2 Fund eligibility criteria. For example, Article 2 pensions are now available to individuals who were subject to persecution in camps that had not previously been recognized as concentration camps (including those in the former Yugoslavia, Slovakia, Hungary and North

Africa); forced labor battalions in Hungary, Romania and Bulgaria; or in open ghettos in Romania and Bulgaria.

CEEF (“Central and Eastern European Fund”)

Large numbers of Holocaust survivors continued to live in the former Soviet bloc after the fall of Communism. These survivors — who received minimal, if any, compensation in the first decades after the Holocaust — remained the subject of difficult ongoing discussions between the Claims Conference and Germany. Finally, in 1998, the CEEF program — in effect, an extension of Article 2 — was created with eligibility criteria the same as for the Article 2 Fund. Unlike the Article 2 Fund, however, the CEEF presumed that Holocaust survivors living in Central and Eastern Europe, as well as in the nations of the former Soviet Union, were in financial need.

RSP (“Regional Specific Pension Program”)

The RSP, a pension program negotiated in 2021, provides direct payments to groups not previously eligible for pensions. Individuals who survived the siege of Leningrad, or the Axis occupation in Romania without being incarcerated in ghetto or camps, as well as those who lived in hiding in France with some form of access to the outside world are eligible for the RSP.

Austrian Government Pensions

Many Jewish Holocaust survivors from Austria receive a monthly payment from the Austrian government. Most of these pensions are provided to individuals under the General Social Insurance Law. Technically, these are pensions for time “worked” in Austria and payments are paid under the Austrian social security system, including to those who might have fled

the country as an infant in 1939. Some small number of former Austrian Jews who were incarcerated in camps also receive a pension under the *Opferfürsorgegesetz* (“Victims’ Welfare Act”).

Hardship Fund and Hardship Fund Supplemental

The Hardship Fund, a one-time payment program, was originally negotiated by the Claims Conference in 1980. It provides compensation to those who had been excluded or did not receive a payment from the original BEG agreement, in particular those who were living in Soviet bloc countries in the 1950s and 1960s and subsequently immigrated to the West. In 2011 and 2012, the Fund was expanded to include residents of Eastern Europe and the FSU. The Fund continues to accept applications and includes individuals who were persecuted as Jews and:

- Suffered deprivation of liberty (such as confinement in a ghetto or camp, forced labor, living in hiding or under false identity) and do not receive a pension; or
- Fled from the Nazi regime; or
- Fled between June 22, 1941 and January 27, 1944 from areas of the Soviet Union that were generally up to 100 kilometers from the most easterly advance of the German army (Wehrmacht) but were not later occupied by the Nazis; or
- Stayed in Leningrad at some time between September 1941 and January 1944 or fled from there during this period; or
- Suffered “restriction of liberty” as defined by the German government (such as being forced to wear the Star of David); or
- Were restricted in movement, lived under curfew or suffered compulsory registration with limitation of residence (e.g., *résidence forcée*) as in Morocco, etc.; or suffered

during the relevant period Nazi persecution in Algeria, such as loss of education, loss of property or economic, professional and social restrictions; or

- Were part of the Kindertransport; or
- Were a fetus at the time that their mother suffered persecution as described above.

These one-time payments are not available to those who currently receive pensions.

As a result of ongoing Claims Conference negotiations that seek to reduce or remove many of the barriers limiting survivors’ eligibility for these programs, the criteria for receiving one-time payments have changed over time.

Child Survivor Fund

The Child Survivor Fund is also a one-time payment program, negotiated in 2015. The fund is intended to acknowledge the suffering of Holocaust survivors who endured childhood trauma, encompassing a range of experiences such as separation from parents, living in hiding, privation and abuse in ghettos, and even incarceration in concentration camps, where very few children survived.

The fund provides payment to any survivor born on or after January 1, 1928, and who suffered any of the following types of persecution:

- Was in a concentration camp
- Was in a ghetto (or similar place of incarceration in accordance with the German Slave Labor Program)²⁵
- Was in hiding or living under false identity/ illegality for a period of at least 4 months in Nazi-occupied or Axis countries
- Was a fetus during the time that their mother suffered persecution.

APPENDIX B: CLAIMS CONFERENCE HOLOCAUST SURVIVOR DEFINITION (APPROVED BY GERMAN GOVERNMENT FOR HOME CARE)

A Jewish Nazi victim is considered to be any Jew who is verified as being persecuted as a Jew in Germany, Austria or any other country occupied by the Nazis or their Axis allies during the dates below or who emigrated from any of the countries below after the beginning dates and before liberation and suffered recognized persecution:

- Germany, between 30 January 1933–May 1945
- Austria, between July 1936–May 1945
- Czechoslovakia, between October 1938–liberation in May 1945
- Poland, between 1 September 1939–liberation in January 1945 (NOTE: the city of Lviv (also known as Lemberg), formerly in Poland and now Ukraine was liberated in July 1944)
- Algeria, between July 1940–November 1942
- Tunisia, between July 1940–May 1943
- Morocco, between July 1940–November 1942 (those in Spanish Morocco and Tangiers are not eligible)
- Denmark, between April 1940–May 1945
- Norway, between April 1940–May 1945
- Belgium, between May 1940–February 1945
- Netherlands, between May 1940–liberation in May 1945
- France, between May 1940–liberation in September 1944
- Luxembourg, between May 1940–February 1945
- Hungary, between April 1941–liberation in Budapest in January 1945 (certain parts of Western Hungary were liberated in March 1945)
- Yugoslavia, between April 1941–liberation in May 1945
- Greece, between April 1941–November 1944 (liberation of some islands such as Rhodes was in May 1945)
- Libya, between February 1941–February 1943 (for those who were in recognized camps only)

- Albania, between September 1943–November 1944
- Italy, between 9 September 1943–liberation in April 1945 (NOTE: Rome was liberated in June 1944 and more southern parts of Italy were liberated even earlier.)
- Bulgaria, between April 1941–September 1944
- Romania, between April 1941–August 1944 (NOTE: Hungarian-occupied Transylvania, e.g. Satu Mare, was liberated in October 1944)
- Dutch East Indies, between November 1943–May 1945
- Former Soviet Union-occupied Western areas, which include:
 - Northern Caucasus between August 1942–February 1943
 - Pskov Region, Russia between June 1941–July 1944
 - Latvia and Lithuania between June 1941–October 1944 (Kurland in Latvia was liberated in May 1945)
 - Estonia between June 1941–October 1944
 - Belarus between June 1941–July 1944
 - Moldova between June 1941–August 1944
 - Ukraine between June 1941–liberation in March 1944 (although the Eastern part of Ukraine was liberated earlier, such as Kiev, in November 1943, the former Polish parts of Galicia were liberated later in summer 1944 (e.g. Lviv in July 1944) and the former Czechoslovakian Karpato-Ukraine was liberated in October 1944)
 - Leningrad/St Petersburg between June 1941–January 1944

The definition of Jewish Nazi victims also includes the following:

- Jews who survived the Leningrad siege
- Jews who fled between June 22, 1941 and January 27, 1944 from areas of the Soviet Union that were up to 100 km from the

most easterly advance of the German army (Wehrmacht) but were not later occupied by the Nazis. This covers cities such as Moscow and Stalingrad.

- Jews born in Shanghai between February 1933–May 1945 with parents that fled from Nazi Germany after January 30, 1933 or fled the Nazis from a country that had been occupied by Nazi Germany or their Axis allies
- “Fetus cases,” i.e., persons who were in utero at the time their mothers were persecuted. The Nazi victim’s mother must meet the above criteria.

In cases where Nazi victim status is unclear, agencies should consult the Claims Conference which will refer the matter to an in-house expert for clarification.

Differences in definition in Israel

The definition of survivor represented in the Claims Conference data is the result of negotiations with Germany to seek compensation for all Jewish individuals harmed by Nazi persecution. In Israel, where the greatest number of survivors reside, and with the similar objective of recognizing and compensating survivors of Nazi persecution, there have been several court rulings resulting in differences in the definition of “survivor,” and decisions of the Israeli government to expand it.

For example, the Claims Conference definition includes all Jews from Libya whose freedom was deprived in camps.

- The Israeli government decided to use a wider criterion as of 2010, and at that time also recognized Jews from Libya who were neither incarcerated in camps nor lived in curfew, but for their flight from their cities to the villages.
- The Claims Conference recognizes

Jews who were fetuses during the Nazi persecution of their mother, who were born up to nine months after the liberation/flight of their mother.

- The Israeli government began to use a wider criterion as of 2012, and at that time also recognized those who were born more than nine months up to 300 days after the liberation/flight of their mother.

The Claims Conference was the first to recognize Jews from Morocco whose freedom was deprived in camps and those who were forced to move or to continue to live in the mellah (Jewish quarter) in Nazi-influenced French Morocco.

The Israeli government began as of 2015 to recognize all Jews from Morocco, including those whose freedom was neither deprived nor restricted, as well as those who did not live under Nazi instigation but under neutral Spain.

- The Israeli government has not recognized the Moroccans (as well as the Algerians) as Holocaust survivors or Nazi victims but as those who experienced antisemitic and racist harassment during the Second World War, and who are not entitled to payments under Israeli laws for Nazi victims. Their claim for payments under the Israeli Disabled Victims of Nazi Persecution Law was rejected by the Israeli Supreme Court in 2019.

The Israeli government also recognized in 2015 Jews who experienced the Farhud events in Iraq (in 1941)¹⁶, but has not recognized them as Holocaust survivors or Nazi victims but as those who experienced antisemitic and racist harassment during the Second World War, and who are not entitled to payments under Israeli laws for Nazi victims.

APPENDIX C: HOLOCAUST SURVIVOR POPULATION BY COUNTRY, 2024

Region	Country	Survivors	%	Region	Country	Survivors	%
Israel	Israel	110,100	49.9	Eastern Europe cont.	Slovak Republic	200	0.1
	Region Total	110,100	49.9		Bulgaria	200	0.1
Western Europe	France	18,900	8.6		Croatia	200	0.1
	Germany	11,900	5.4		Estonia	100	0.1
	Italy	1,300	0.6		Serbia/Montenegro	100	<0.1
	Netherlands	1,300	0.6		Bosnia-Herzegovina	100	<0.1
	U.K.	1,100	0.5		Rest of Region ³	<100	<0.1
	Belgium	1,100	0.5		Region Total	5,400	2.4
	Austria	300	0.1	Oceania	Australia	2,200	1.0
	Denmark	300	0.1		Rest of Region ⁴	<100	<0.1
	Greece	200	0.1		Region Total	2,200	1.0
	Switzerland	200	0.1	South America & Caribbean	Brazil	300	0.1
	Sweden	200	0.1		Argentina	200	0.1
	Spain	100	<0.1		Rest of Region ⁵	100	<0.1
	Rest of Region ¹	100	<0.1		Region Total	600	0.3
	Region Total	36,700	16.6	All Other	All Other	300	0.2
North America	United States	34,600	15.7	"Rest of Region" Countries 1) Western Europe: Cyprus, Finland, Ireland, Luxembourg, Martinique, Monaco, Norway, Portugal 2) Former Soviet Union: Armenia, Azerbaijan, Georgia, Kyrgyzstan, Tajikistan, Turkmenistan 3) Eastern Europe: Albania, Macedonia, Slovenia 4) Oceania: French Polynesia, New Caledonia, New Zealand 5) South America & Caribbean: Bermuda, Chile, Colombia, Costa Rica, Curacao, El Salvador, Guadeloupe, Haiti, Netherlands Antilles, Panama, Peru, Puerto Rico, Uruguay, Venezuela, Ecuador, Bolivia, Paraguay, Guatemala, Jamaica, Dominican Republic 6) All Other: Cameroon, Mauritius, Senegal, South Africa, Tunisia, Cambodia, India, Indonesia, Japan, Philippines, Sri Lanka, Thailand, Turkey Note: Due to rounding, numbers may not precisely equal totals.			
	Canada	5,200	2.4				
	Mexico	<100	<0.1				
	Region Total	39,900	18.0				
Former Soviet Union	Russian Fed.	16,100	7.3				
	Ukraine	6,200	2.8				
	Belarus	1,900	0.8				
	Latvia	400	0.2				
	Lithuania	200	0.1				
	Moldova	200	0.1				
	Estonia	200	0.1				
	Kazakhstan	200	0.1				
	Uzbekistan	100	<0.1				
	Rest of Region ²	100	<0.1				
	Region Total	25,500	11.6				
Eastern Europe	Hungary	3,200	1.4				
	Romania	500	0.2				
	Czech Republic	400	0.2				
	Poland	400	0.2				

NOTES

- 1) 220,800 represents the number of Holocaust survivors known to the Claims Conference. As there are likely survivors who may choose not to be identified, as well as individuals who may not consider themselves to be Holocaust survivors, the estimate of 220,800 represents the lower-bound on the total number of survivors alive today. *See Methodological Notes.*
- 2) In the years following the earliest negotiations with the German government leading to the BEG, the Claims Conference negotiated additional compensation programs, including for Austrian survivors, as well as for those who had survived slave labor for some of the most notorious entities during the Nazi era, such as IG Farben and Friedrich Krupp. See Benjamin B. Ferencz, *Less Than Slaves: Jewish Forced Labor and the Quest for Compensation* (Rev. ed. Indiana Univ. Press 2002); *The Conference on Jewish Material Claims Against Germany, 70 Years of the Claims Conference* (2021). Although prior programs, such as compensation for slave labor, are now closed, additional information about the current population of survivors was informed by data available from these previous programs.
- 3) 40,834 survivors in Israel were reported to receive monthly benefits from the Holocaust Survivors' Rights Authority (https://www.gov.il/he/pages/international_day_of_the_elderly). This reported number includes Article 2 recipients who received supplemental payments to address unmet need. It does not include German BEG recipients. The estimate of 23,600 survivors excludes the Article 2 recipients (so they are not double counted).
- 4) Federal Ministry of Finance: Federal Compensation Act Pension Recipients by Country of Residence, December 31, 2024.
- 5) Mortality based on population change from December 2, 2021 (N = 3,107) to December 2, 2022 (N = 2,666), which corresponds to 14% annual change and 25% change over 23 months (December 2022 to October 2024).
